

Delta® - MS

Brand: Delta
Product No: 22600001.WP ... more

Description

- [Below-grade Dimpled Membrane]
- The Foundation Protection System that Keeps Basements Dry
- Impermeable to water and water vapor, keeping basements dry
- Meets all building code requirements in the USA and Canada
- Two lines of defense against water intrusion: dimpled membrane provides capillary break; air-gap allows incidental water to freely drain by gravity
- Eliminates interior dampness and musty odors
- Reliably bridges foundation cracks and deflects soil moisture, unlike asphaltic sprays
- Continues to function even if foundation shifts or cracks
- No unpleasant chemical odors or harmful VOCs
- Resists damage from backfill, like rocks and debris
- Installs in all types of weather
- Made from high-density polyethylene (HDPE)
- A co-extruded product, 60% recycled HDPE and 40% virgin HDPE
- Virgin HDPE outside layer and recycled HDPE core makes it the most durable dimpled membrane on the market
- The vacuum-formed dimpled pattern allows incidental water to flow into the footing drain
- Available in many sizes for easy installation on various foundation heights
